Gallium Nitride Based Metal-Insulator-Semiconductor (MIS) Structures Varra Rajagopal Reddy, B. Prasanna Lakshmi

Gallium nitride (GaN) metal-insulator-semiconductor (MIS) are very attractive because of their advantages such as a small gate leakage current, a large gate forward voltage, and surface passivation effect suppressing the drain current collapse. However, conventional Schottky barrier transistors suffer from the high gate leakage current and in particular the leakage current in the forward direction can cause fast device degradation. Reduction of the gate leakage current can be realized by employing an insulated gate metal-oxide-semiconductor technique. The interest in the experimental studies of metal-semiconductor (MS), metal-insulator-semiconductor (MIS) Schottky diodes rooted in their importance of the insulating layer between metal and semiconductor. The existence of such interfacial layer can have strong influence on the device characteristics such as the barrier height, ideality factor, and as well the interface state density. Due to the technological importance of the metal-insulator-semiconductor (MIS), a full understanding of its electrical properties is of great interest.

From reader reviews:

Mitchell Diaz:

Now a day people that Living in the era where everything reachable by talk with the internet and the resources in it can be true or not demand people to be aware of each details they get. How individuals to be smart in receiving any information nowadays? Of course the solution is reading a book. Examining a book can help persons out of this uncertainty Information specifically this Gallium Nitride Based Metal-Insulator-Semiconductor (MIS) Structures book because book offers you rich details and knowledge. Of course the information in this book hundred per cent guarantees there is no doubt in it you probably know this.

Jessica Ball:

Spent a free time and energy to be fun activity to accomplish! A lot of people spent their spare time with their family, or their own friends. Usually they doing activity like watching television, gonna beach, or picnic from the park. They actually doing same every week. Do you feel it? Do you wish to something different to fill your free time/ holiday? Can be reading a book might be option to fill your free of charge time/ holiday. The first thing that you will ask may be what kinds of guide that you should read. If you want to try out look for book, may be the publication untitled Gallium Nitride Based Metal-Insulator-Semiconductor (MIS) Structures can be great book to read. May be it could be best activity to you.

Johnnie Santiago:

The actual book Gallium Nitride Based Metal-Insulator-Semiconductor (MIS) Structures has a lot info on it. So when you read this book you can get a lot of gain. The book was published by the very famous author. The author makes some research before write this book. This specific book very easy to read you may get the point easily after scanning this book.

Barbara Watson:

On this era which is the greater man or who has ability in doing something more are more valuable than other. Do you want to become considered one of it? It is just simple solution to have that. What you have to do is just spending your time little but quite enough to get a look at some books. One of the books in the top list in your reading list is actually Gallium Nitride Based Metal-Insulator-Semiconductor (MIS) Structures. This book that is qualified as The Hungry Mountains can get you closer in turning into precious person. By looking up and review this reserve you can get many advantages.
