Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books)

Barrie D. Dunn

The objective of this book is to assist scientists and engineers select the ideal material or manufacturing process for particular applications; these could cover a wide range of fields, from light-weight structures to electronic hardware. The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can, by analogy, be applied to other industries. Difficult-to-find material data is included for reference. The sciences of metallic (primarily) and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes, which involve quality, material and processes evaluations, and the selection of mechanical and component parts.

In this successor edition, which has been revised and updated, engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs. Space hardware captured by astronauts and returned to Earth from long durations in space are examined. Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics, medical equipment and ground transportation. This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering. It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.

From reader reviews:

Jaleesa Greenwood:

What do you about book? It is not important together with you? Or just adding material when you need something to explain what the ones you have problem? How about your free time? Or are you busy person? If you don't have spare time to perform others business, it is make one feel bored faster. And you have time? What did you do? Every person has many questions above. They must answer that question due to the fact just their can do that will. It said that about book. Book is familiar in each person. Yes, it is proper. Because start from on guardería until university need this specific Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) to read.

Dominique Fletcher:

Now a day people who Living in the era everywhere everything reachable by connect to the internet and the resources inside can be true or not call for people to be aware of each data they get. How individuals to be smart in having any information nowadays? Of course the correct answer is reading a book. Studying a book can help folks out of this uncertainty Information particularly this Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) book because this book offers you rich details and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it you may already know.

Ronald Smith:

The e-book untitled Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) is the guide that recommended to you to read. You can see the quality of the guide content that will be shown to an individual. The language that author use to explained their way of doing something is easily to understand. The article writer was did a lot of exploration when write the book, to ensure the information that they share for your requirements is absolutely accurate. You also might get the e-book of Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) from the publisher to make you much more enjoy free time.

Katie Barry:

Reading can called imagination hangout, why? Because if you find yourself reading a book specially book entitled Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) your mind will drift away trough every dimension, wandering in each aspect that maybe not known for but surely can become your mind friends. Imaging each word written in a book then become one contact form conclusion and explanation that maybe you never get before. The Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) giving you yet another experience more than blown away your brain but also giving you useful details for your better life on this era. So now let us demonstrate the relaxing pattern the following is your body and mind are going to be pleased when you are

finished looking at it, like winning a sport. Do you want to try this extraordinary paying spare time activity?
