Health Care Systems in Developing and Transition Countries: The Role of Research Evidence (Global Development Network)

Health Care Systems in Developing and Transition Countries: The Role of Research Evidence (Global Development Network)

Health policy is a central preoccupation of many, if not all, developing countries. This innovative book presents a selection of ten studies illustrating that carefully conducted research can address common health policy issues. The studies included in this book exemplify the major gains to patients and citizens that can accrue from research efforts, stimulating research capacity in developing countries. Although many of the challenges confronting health systems are universal, it is often the case that research results derived from developed countries can be misleading when applied to low or middle-income settings. The authors also demonstrate the best examples of successful research on health policies and systems from diverse countries such as Argentina, Bangladesh, Cambodia, Cameroon, Chile, Mexico, Nigeria, Peru, Sri Lanka and Taiwan. This insightful book will be a valuable research tool for academics, researchers and policymakers in economics and health. International agencies interested in applied research in health policy and economics will also find it a stimulating read.
