**Healthcare Applications: A Casebook in Accounting and Financial Management** Thomas E. McKee, Linda J. B. McKee

Financial issues are of paramount importance in today's rapidly changing and increasingly competitive healthcare environment. Healthcare managers must understand accounting and financial management concepts and be prepared to operationalize them in their organizations. *Healthcare Applications: A Casebook in Accounting and Financial Management* provides a series of practice exercises for analyzing, understanding, and applying these concepts across a wide range of healthcare settings. *Healthcare Applications* contains 56 short cases designed to link theory to practical, real-world application via active learning. Based on fictitious entities and individuals (unless otherwise noted), the cases cover basic concepts such as how to record transactions, compute financial ratios, and prepare financial statements as well as more advanced issues, such as the effects of healthcare regulation, the valuation of debt or equity securities, cost volume profit analysis, and capital budgeting. Each case features assignments or questions to enhance students' critical thinking and generate classroom engagement. Instructors can select case topics and difficulty levels that are most appropriate for their courses. The book's cases can be either assigned as out-of-class homework or used directly in class to introduce a topic or facilitate discussion.
